

**Hello community partners:**

IVCSD anticipates our contractor, Chester-based Dig It Construction, will begin work next week on our Greenville Water Line Replacement Project. Beginning in the coming weeks and lasting through late July there will be traffic controls at various times on the following streets and roads in town:

- North and South Main
- Bush
- Hot Springs
- Throughout the flats

This project will provide long-term stability for Greenville's drinking water system by replacing a significant portion of our main and lateral lines. These replacements will allow our field staff to shift to a proactive work model instead of constantly reacting to leaks and other issues. This approximately \$2.7 million project is funded by grants from Upper Feather River Integrated Regional Water Management/Plumas County and the State of California's Small Communities Drought Relief Program.

Please contact myself or Utility Manager Mike Sundby with any questions and please feel free to share this information with your networks.

Thank you,

Adam Cox | General Manager  
Indian Valley Community Services District
